INDUSTRIAL & COMMERCIAL FLOORING SPECIALISTS

www.specfloors.co.za

SPEC FLOORS are globally certified applicators of HACCP approved flooring systems

POLYURETHANE SYSTEMS

In a high traffic, high impact industrial environment it is critical that floors are resistant to damage, reliable under demanding conditions & safe to work on for employees. For this reason, many businesses choose polyurethane floors to ensure durability, safety & resilience. They offer protection against damage, help to prevent slipping and are an attractive final touch to your floors.

POLYSPEC - ANTI-MICROBIAL 2mm-9mm

An antimicrobial agent is homogenously distributed throughout the floor to enhance on-site hygiene levels and complement floor cleaning and sanitation practices between wash cycles.

Suitable for use in food & beverage, health care, cosmetics & pharmaceutical industries in factory, packaging, processing and warehousing areas.

POLYSPEC - ANTI-STATIC 3.5mm - 6mm

ESD is a threat in many environments. An electrostatic protected area is created by installing an epoxy coating that safely dissipates electrostatic charge to ground faster than it accumulates.

Suitable for use in computer, electronics, chemical, ammunitions & explosives industries in assembly, production, decanting and containment areas.

Today's intense focus on sanitation standards & cleanliness means that hygiene must be factored into the very fabric of a building. Hazard Analysis & Critical Control Point (HACCP) is a globally recognized safety programme which allows food & beverage producers to rest assured their facilities will meet standards for safe procurement, production and processing. SPEC FLOORS has been accredited with HACCP international certification due to its ability to meet the stringent standards of food industry regulators.

SPECIALIZED SYSTEMS

In a manufacturing environment the general rule is that anyone should be able to walk into a workplace and identify the flow within 60 seconds. Whether that flow is NO GO or GO, for people or vehicles, demarcation plays a huge role in ensuring safety, productivity and order are maintained.

PARKING DECKS

A wide variety of application suited products brighten up car park areas, reduce tire squeal noise and deliver good chemical resistance. Hard wearing as well as UV and abrasion resistant.

Suitable for use in all retail, commercial, industrial and warehousing environments and high traffic indoor and outdoor parking areas.

DEMARCATIION

An assortment of easy to clean, seamless and hard-wearing products are available. Most systems are slip resistant, liquid proof and offer good chemical and abrasion resistance.

Suitable for use in production, commercial, industrial and warehousing environments and high traffic areas indoors and outdoors.

EPOXY SYSTEMS

Epoxy floor coatings are hard wearing and durable solutions for both commercial and industrial flooring. They can be applied over existing concrete & provide a high performance & attractive surface and finish.

EPOXY SPEC 500

These 60 – 500 micron systems offer a cost effective, hygienic floor & wall coating solution for light traffic floors with mild chemical cleaning.

Suitable for use in change rooms, ablutions, clean room environments, factories, schools, hospitals, warehouses, walkways & general applications.

EPOXY SPEC 1000 - 4000

1mm – 4mm systems are economical, durable & cost-effective solutions for heavy wear requiring a smooth, chemical and abrasion resistant floor.

Suitable for use in garages & workshops, canteens, pharmaceutical & cosmetic plants, printing plants, laboratories, electronics and aerospace facilities.

EPOXY SPEC QUARTZ

Ideal for areas subject to heavy wear but requiring a modern, decorative finish. These seamless, easy to clean systems are hygienic with good service life.

Suitable for use in reception areas, lobbies, stadiums, canteens, shopping malls, hotels as well as passages, foyers and ablutions.

EPOXY SPEC TERRAZZO

This hard wearing, abrasion resistant system offers excellent chemical resistance. An easy to clean, non-slip, seamless decorative flooring solution.

Suitable for use in hospitals, hotels, shopping malls, passageways, reception areas and many private and residential applications.

SPECIALIZED SYSTEMS

CONCRETE POLISHING

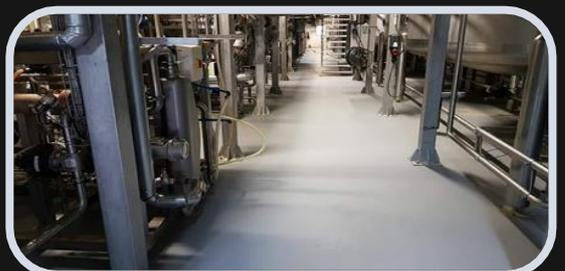

Transform a dull concrete floor into a floor which is shiny and dust-free. Polishing brings out the true beauty of concrete in a remarkable way.

Rejuvenate concrete substrates in any retail, commercial, industrial and warehousing environment regardless of traffic and usage.

CHEMICAL RESISTANT LININGS

Corrosive agents such as sugars & acids are a floors' worst enemy. These linings offer total protection against corrosive agents & chemical attacks.

Suitable for use in high temperature production, commercial, chemical and warehousing environments on most substrates, indoors and out.

THE COMPANY

Doing business with SPEC FLOORS assures you of far more than a competitively priced, application suited flooring solution.

SPEC FLOORS entered the commercial and industrial flooring market over 20 years ago with a single vision. That vision was to be a market leader in terms of flooring skill, creativity and technology, and we pride ourselves in having reached that goal.

Our success has been achieved by following two simple principals; attention to detail and delivering value at every interaction. From the first point of contact with us you can be assured of customer centricity, sales professionalism and expert advice. Once on site, highly skilled preparation and application teams use state-of-the-art equipment and internationally assured products to produce flooring foundations and finishes of the highest standards, both structurally and visually. Quality assurance is very close to our hearts and we deliver this through constant on-site supervision, pre-delivery inspection and customer involved hand-over. These practices have resulted in us having built an enviable reputation for quality and delivery, which reflect in our high levels of customer satisfaction and loyalty.

Our decades of flooring experience, both locally and internationally have taught us much, yet we still strive to learn more. We maintain our coveted usage and application accreditation status with our global suppliers through consistent training in, and adherence to, their stipulated application methods. We stay ahead of the market through our bench-markings and studies of industry trends, product enhancements and equipment and technology developments and apply those learnings that add value to our deliveries.

As we have grown so has our vision, that vision is to have customers asking the question “Do I want any floor, or do I want a SPEC FLOOR?”
